

### **CITY OF NORTH OAKS**

### Regular Planning Commission Meeting Thursday, March 28, 2024 7:00 PM, Community Meeting Room, 100 Village Center Drive <u>MEETING AGENDA</u>

**<u>Remote Access</u>** - Planning Commission members will participate in person in Council Chambers (Community Room, 100 Village Center Drive, Suite 150, North Oaks, MN) during the meeting. Members of the public are welcome to attend. Any person wishing to monitor the meeting electronically from a remote location may do so by calling the following Zoom meeting videoconference number: 1-312-626-6799, Webinar ID: 859 6829 4092 or by joining the meeting via the following link: https://us02web.zoom.us/j/85968294092.

### 1. Call To Order

2. <u>Roll Call</u>

#### 3. <u>Pledge</u>

4. <u>Citizen Comments</u> - Members of the public are invited to make comments to the Planning Commission during the public comments section. Up to four minutes shall be allowed for each speaker. No action will be taken by the Commission on items raised during the public comment period unless the item appears as an agenda item for action.

#### 5. Approval of Agenda

#### 6. Approval of Previous Month's Minutes

6a. Approval of Planning Commission Minutes of 2.29.2024 <u>Planning Commission Minutes 2.29.24.pdf</u>

#### 7. <u>Business Action Items</u>

7a. Consider septic variance for 6 Badger Lane 2024-03-28 PC packet 6 Badger lane.pdf

Variance PC 6 Badger Lane.pdf

7b. Public Hearing - Consider Conditional Use Permit for building height in excess of 35 feet for property located at 8 Sherwood Trail. Consider driveway setback variance. 2024-03-28 PC Packet 8 Sherwood Trail.pdf 7c.Consider resolution in opposition of the Missing Middle Housing Bill

### 8. <u>Commissioner Report(s)</u>

9. Adjourn

#### North Oaks Planning Commission Meeting Minutes City of North Oaks Community Meeting Room February 29, 2024

### **1. CALL TO ORDER**

Chair Cremons called the meeting to order at 7:00 p.m. He welcomed returning Commissioner Joyce Yoshimura-Rank who has accepted a new term of service, as well as new Commissioner David Loegering.

### 2. ROLL CALL

Present: Chair David Cremons, Commissioners Stig Hauge, David Loegering, Bob Ostlund, Nick Sandell, Grover Sayre III, Joyce Yoshimura-Rank, Councilor Mark Azman Staff Present: Administrator Kevin Kress, City Planner Kendra Lindahl, City Septic Inspector Brian Humpal Present Via Electronic Means: City Attorney Bridget Nason via Zoom Others Present: Videographer Sam Wagner A quorum was declared present

### **3. PLEDGE OF ALLEGIANCE**

Chair Cremons led the Council in the Pledge of Allegiance.

### **4. CITIZEN COMMENTS**

There were no comments at this time.

### 5. APPROVAL OF AGENDA

City Administrator Kress requested to move items 7d. and 7e. to the top of the agenda.

MOTION by Cremons, seconded by Hauge, to approve the agenda as amended. Motion carried unanimously.

#### **<u>6. APPROVAL OF PREVIOUS MONTH'S MINUTES</u> a. Approval of November 30th, 2023 Minutes**

MOTION by Sayre, seconded by Yoshimura-Rank, to approve the Planning Commission Meeting Minutes of November 30th, 2023. Motion carried unanimously.

### 7. BUSINESS ACTION ITEMS

a. Public Hearing – Consider Conditional Use Permit for garage size in excess of 1,500 square feet and building addition for property located at 70 W. Pleasant Lake Road

Chair Cremons noted that the applicant had submitted a similar application to the Planning Commission one year prior, and that application was approved. This new application is a minor amendment that increases the size of the garage. City Planner Lindahl noted that the CUP is a 1,296 square foot garage addition and a smaller 306 square foot detached accessory structure. This property is in the shoreland overlay district for Pleasant Lake, but below any restrictions related to setbacks. Very little has changed since the prior application. Staff included conditions in their report to address the combined garage square footage of 2,446 that is proposed by the applicant. One item in their conditions noted that the Floor Area Ratio is very close to the 12% limit, and they have included a condition that the applicant needs to confirm compliance at the time a building permit is submitted.

## MOTION by Hauge, seconded by Sayre, to open the public hearing at 7:06 p.m. Motion carried unanimously.

A neighbor of the property, Larry Wipf from 66 West Pleasant Lake Road spoke in support of the request.

Chair Cremons stated that the garage is three feet longer than the prior application. The applicant, Mark Udager, commented that he had made a calculation error in his prior application, and apologized to the Commission for not catching it before.

## MOTION by Yoshimura-Rank seconded by Sandell, to close the public hearing at 7:10 p.m. Motion carried unanimously.

Commissioner Ostlund noted his concern that the upper floor of the garage should not be constructed with rough-ins for plumbing, electrical, etc. and asked that the Building Official keep an eye out to make sure that the unit could not be turned into an Accessory Dwelling Unit.

## MOTION by Sandell, seconded by Sayre, to approve the application with conditions as outlined in the staff report. Motion carried unanimously.

#### b. Consider septic variance for property located at 4 Dove Lane

Chair Cremons stated that this variance is an application to replace a failing cesspool system. City Planner Lindahl summarized the staff report. Because this is an existing home, it is not considered a redevelopment so the only thing that the applicant needs a variance for is the setback for the system itself. This is a single-family home on a relatively small lot. The only viable location for a septic site is up against the street. The applicant is proposing a zero-foot setback. Staff believe that the variance standards have been met, and the application solves a potential public health issue by allowing the construction of a new, functional septic system and eliminating the noncompliant septic system.

City Septic Inspector Brian Humpal noted that there is still a five-foot buffer to the setbacks because the setbacks are measured from the absorption area and rockbeds of the system, however there will be berms that will extend to the property line. By nature, those are allowed to extend to the setback, they just need to remain on the property. It would not be encroaching on an adjoining property, but the easement to Edgewater Lane.

Chair Cremons asked about an open area to the southeast and if this area was looked at as a possible location for the system. Humpal explained that other setbacks prevented this area from being viable. The setback is applicable to the tanks as well as the drainfield.

The applicant, Jim Christiansen, explained that the issue came to light because he had purchased the home with the intention of renovating it. He wanted to add an additional bathroom but was unable to do so unless the system was updated.

Chair Cremons asked how the existing cesspools would be closed. Humpal explained that a cesspool system is a tank that has been constructed without a bottom and made out of blocks without mortar joints. By design, they leak into the ground. To close the tanks, the existing tanks would be pumped out, collapsed and filled-in. Long-term, if a new system were to fail in a spot where there are no other alternative septic sites, they would need to completely haul out the system and replace it. A typical lifespan of a Type III system would be about 50 years.

Commissioner Ostlund asked for clarification on whether the property was planning to be rented, and how many bedrooms it will have. The applicant stated the intention is to sell it, and that there will be six bedrooms. Humpal confirmed that the new system has been designed to meet the size of a six-bedroom home.

MOTION by Hauge, seconded by Sayre, to approve the application with conditions as outlined in the staff report. Motion carried unanimously.

## c. Public Hearing – Consider Conditional Use Permit for building height in excess of 35 feet for property located at 8 Sherwood Trail

City Planner Lindahl asked that this item be continued to the March 28<sup>th</sup> Planning Commission meeting. After reviewing the application, staff realized that the applicant would also need a variance for wetland setbacks. Lindahl has spoken to the applicant and they have asked to move their CUP application to March so that both applications can be reviewed together. Chair Cremons decided to open the public hearing since it had been noticed to the public.

## MOTION by Yoshimura-Rank, seconded by Sandell, to open the public hearing at 7:36 p.m. Motion carried unanimously.

Based on the conversation, Chair Cremons stated they would continue the public hearing at the March 28<sup>th</sup> Planning Commission Meeting.

Leanne Savereide from 4 Red Maple Lane stated that she would like to welcome the neighbors to the neighborhood, but she is also concerned about the placement of the house near the wetland. She would appreciate the Commission's attention to this matter at the next meeting.

### MOTION by Cremons, seconded by Hauge, to continue the public hearing at the March 28<sup>th</sup> Planning Commission Meeting. Motion carried unanimously.

## d. Public Hearing – Consider Conditional Use Permit for building height in excess of 35 feet for property located at 1 Sherwood Trail

City Planner Lindahl stated that this application is for a new home to be constructed 40 feet 7 inches high where the code allows a 35-foot building height. The application complies with the setback requirements. The front elevation is 60 feet from the roadway and the side and rear elevations are more than 100 feet from the adjacent properties. The east side elevation is the side that exceeds 35 feet in height. The Floor Area Ratio worksheet has been provided and shows compliance with the 12% max requirement. Staff believe the applicant has complied with the conditions for a CUP.

Chair Cremons asked the status of trees on this lot. The applicant, Scott Hockert from Hanson Builders stated he was not prepared to answer that question pertaining to the CUP and he would have to get back to them on that.

City Planner Lindahl and the applicant stated that this home is a lookout rather than a walkout, which minimizes the amount of dirt being moved and the impact on the topography of the land. The lookout would be on the East side of the home.

## MOTION by Yoshimura-Rank, seconded by Sayre, to open the public hearing at 7:43 p.m. Motion carried unanimously.

There were no members of the public in the Community Room or on Zoom who made comments.

## MOTION by Yoshimura-Rank seconded by Hauge, to close the public hearing at 7:44 p.m. Motion carried unanimously.

Commissioner Sayre asked if much excavation would be needed at the lookout site. The applicant and City Administrator Kress noted that it would be about two feet of excavation.

Chair Cremons stated that he would like to discuss the current state of trees on the property and what the plan is for removal or preservation. City Administrator Kress noted that the northern portion is pretty heavily covered with diseased Ash trees, most of which were marked for removal. Chair Cremons stated he is interested in preserving as many trees as possible and is interested in getting reports from the builder on what their plans are for trees when considering these applications.

City Administrator Kress noted that there is not a City ordinance for tree removal. Chair Cremons stated that NOHOA has more discretion on tree removal, and he understands they have been in conversation with the applicant on the issue. He suggested that perhaps the City Forester and NOHOA provide commentary to the City Council at their meeting when considering final approval.

## MOTION by Cremons, seconded by Yoshimura-Rank, to approve the application with conditions as outlined in the staff report, and a note to the Council that the Commission is

interested in having the applicant share information about tree work being done on the property at the City Council meeting. Motion carried unanimously.

### e. Public Hearing – Consider Conditional Use Permit for building height in excess of 35 feet for property located at 2 Sherwood Trail

City Planner Lindahl stated this application was also submitted by Hanson Builders for a new home on a vacant lot. The proposed home has a front elevation of 33.5 feet and the side and rear elevations are setback more than 80 feet from the adjacent lot lines. The request is for a home that is 39.63 inches in height at the rear. The side facades are less than the 35-foot height limit. The Floor Area Ratio shows compliance with the 12% maximum. Staff finds that the application complies with the conditions for a CUP.

Chair Cremons asked if there was any issue with the slope and City Planner Lindahl confirmed this to be the case. The proposed home is a lookout with very little cut and fill.

### MOTION by Hauge, seconded by Yoshimura-Rank, to open the public hearing at 8:10 p.m. Motion carried unanimously.

There were no members of the public in the Community Room or on Zoom who made comments.

## MOTION by Yoshimura-Rank seconded by Sayre, to close the public hearing at 8:11 p.m. Motion carried unanimously.

## MOTION by Sayre, seconded by Loegering, to approve the application with conditions as outlined in the staff report. Motion carried unanimously.

City Administrator Kress recommended to the applicant that they wait until the April meeting to bring the application to Council for final approval. He anticipates that there will only be three Council members at the next meeting, and it would be beneficial to have a full council look at the applications. The applicant agreed.

#### f. Public Hearing – Consider Ordinance amending City Code XV, Chapter 151, Regarding garage definitions and garage size standards

Chair Cremons introduced this item stating it has been an issue that the Commission has been working on since August 2023. The purpose is to allow more flexibility with respect to garage size since there has been an increase in CUPs on this issue in recent years. The goal would be to circumvent the need for CUPs for what seem to be a more routine requirement. Basic changes include improving definitions to make things clearer and increasing the baseline garage from 1,500 square feet to 2,000 square feet.

City Planner Lindahl noted that the draft includes updates to the definition section of the ordinance and new conditions in the staff report will reduce the number of CUPs that the Commission reviews for garage size.

Commissioner Hauge suggested it might be beneficial to increase the square footage to 2,500 to reduce the number of CUPs even more. The commission discussed this issue and what threshold would reduce the number of CUPs without encouraging overly large garage sizes. Some Commissioners were open to increasing the number to 2,500 or 3,000. City Administrator Kress stated his personal preference for the number to be on the high end because applications are likely to get approved since it is almost impossible for applicants not to meet the conditions for a CUP unless they are over the Floor Area Ratio. Commissioner Sandell spoke in favor of a 3,000 square foot size limitation.

## MOTION by Sayre, seconded by Hauge, to open the public hearing at 8:28 p.m. Motion carried unanimously.

Leanne Savereide of 4 Red Maple Lane stated she admired the Commissioners for going into such depth on this issue, and that she likes the 2,000 square foot limitation.

## MOTION by Hauge seconded by Yoshimura-Rank, to close the public hearing at 8:30 p.m. Motion carried unanimously.

The Commission took a straw poll to get a sense of what number each member preferred for a garage square foot limitation. Most members were open to a number over the suggested 2,000 square foot limit.

MOTION by Cremons, seconded by Hauge, to approve the proposed ordinance amending City Code XV, Chapter 151, regarding garage definitions and garage size standards, with a note to the Council that the majority of the Commissioners were not opposed to increasing the garage size limitation to 2,500 square feet. Motion carried 6-1, with Sandell against.

#### g. Public Hearing – Consider Ordinance amending City Code Title XV, Chapter 151, Regarding building height and setback standards in the RSL – Residential Single Family Low Density District

City Planner Lindahl outlined the proposed changes, including cleaning up and clarifying the language around how height is measured, what counts toward building height, and defining "naturally suited" with measurable allowances. Chair Cremons noted that the working group determined that height would be measured by the tallest portion of the building as opposed to the tallest portion of any particular wall facing a property line.

## MOTION by Cremons, seconded by Sayre, to open the public hearing at 8:36 p.m. Motion carried unanimously.

There were no members of the public in the Community Room or on Zoom who made comments

## MOTION by Hauge seconded by Yoshimura-Rank, to close the public hearing at 8:37 p.m. Motion carried unanimously.

Commissioners discussed the changes. Commissioner Sayre clarified that unlike the previous amendment, this amendment is not intended to reduce the number of CUPs. Rather, it is meant to help the Commission more clearly evaluate an application and whether it preserves the topography of the land. City Administrator Kress noted that the original intention of the ordinance was to slow down movement of dirt and trees in the RSL district where the development was not mass-graded. The goal was to encourage building to fit the lot, not adjusting the lot to fit the build.

Commissioner Sandell said he not in favor of limiting artificial topographical grade change at six feet because it is too restrictive. He would support eight feet instead. A straw vote was taken, and most commissioners preferred six feet.

#### h. MOTION by Cremons, seconded by Hauge, to approve the ordinance amending City Code Title XV, Chapter 151, Regarding building height and setback standards in the RSL – Residential Single Family Low Density District. Motion carried 6-1, with Sandell against.

Planning Commission requested that a note be made to Council that both Sandell and Sayre preferred eight feet instead of six feet for the limit on artificial topographical grade change.

## i. Consider Ordinance amending City Code Title XIII, Chapter 130, regarding unnecessary noise

Commissioners discussed a draft ordinance amendment that would provide time limitations to activities such as loud outdoor music, domestic power equipment, landscaping equipment, etc. with some exceptions for public safety vehicles, snowplows, etc.

Commissioner Ostlund stated that he believes lawn mowers should not be an exception. Commissioner Sayre felt that leaf blowers should be added as an exception. He felt not being able to mow after 6 p.m., as the draft currently states, is too restrictive for homeowners that are working regular hours. Commissioner Sandell said he would not support the draft ordinance because he felt it was too restrictive for busy working families. Commissioner Loegering asked if quieter electric lawn mowers or equipment would be allowed after the time limitations. Chair Cremons clarified that the intention would be to limit the noise level, not the activity itself.

Chair Cremons read a letter from Bill McNee, a resident at 11 Sunset Lane. Mr. McNee does not believe there is a noise problem in North Oaks, and feels that lawn and power equipment use is necessary to maintain properties. He feels the time limitations are too restrictive for working people. He also feels the C5 exemptions item is confusing.

Chair Cremons stated that he feels it is important before making any decisions to get the public's opinion on whether noise is indeed an issue for North Oaks. He also noted that it would be challenging to enforce a noise ordinance. City Attorney Nason stated that violation of the ordinance would be a criminal violation.

Councilor Azman felt it is reasonable for the community to have some limitations on noise, and that there is room for discussion on timing and what items are allowed. The draft ordinance was developed after looking at ordinances from other communities. City Administrator Kress stated that the current ordinance is unenforceable since it is based on decibel level, and the City does not have a way to measure this. Commissioner Sayre brought up the issue of whether the Golf Course would also be subject to this ordinance, and that it might be unreasonable for their operations.

No decision was made on the ordinance amendment. Commissioners will provide further feedback to City Administrator Kress over the next month and continue the discussion at the next meeting. Councilor Azman will ask the Council for more specificity on their interests related to this amendment.

### **8. COMMISSIONER REPORT(S)**

City Administrator Kress gave an update on a proposed berm in the Gate Hill/Spring Farm Road area to separate the homes on Spring Farm Road from Centerville Road. He believes the current proposal looks very nice and does not require any approvals from the Planning Commission.

### 9. ADJOURN

Chair Cremons stated the next Planning Commission meeting would be March 28th, 2024. He will be absent for that meeting, so Commissioner Sandell will serve as Chairman.

## MOTION by Hauge, seconded by Yoshimura-Rank, to adjourn the Planning Commission meeting at 9:19 p.m. Motion carried unanimously by roll call.

Kevin Kress, City Administrator

David Cremons, Chair

Date approved

#### PLANNING REPORT

TO:	North Oaks Planning Commission
FROM:	Kendra Lindahl, City Planner Kevin Kress, City Administrator Bridget McCauley Nason, City Attorney Michael Nielson, City Engineer
DATE:	March 28, 2024
RE:	Septic Variance at 6 Badger Lane (city file 24-3/Landform file 24-004)

Date Application Submitted	February 2, 2024
Date Application Determined Complete:	March 6, 2024
Planning Commission Meeting Date:	March 28, 2024
City Council Meeting Date:	April 11, 2024
60-day Review Date:	May 5, 2024

#### REQUEST

Thomas Romanko has requested approval of a subsurface sewage treatment system (SSTS) variance to the septic system to cross the lot line and be partially located on the adjacent golf course property. The ordinance requires all tanks and treatment areas to be at least 30 feet from all property lines, wetlands and roads. The rock bed is approximately 15 feet from the property line and the mound would cross the property line. The variance would allow a replacement of the SSTS at 4 Dove Lane, which is classified as non-compliant under MPCA Rule 7080.1500, Subp.4(B).

۲

100 Village Center Drive, Suite 230 North Oaks, MN 55127

•

#### BACKGROUND

The site is currently developed with a single family home. The home is surrounded by the golf course on the east and west and single family homes on the north and south.

#### Zoning and Land Use

The property is guided Low Density residential and is zoned Residential Single Family – Low Density (RSL). The 1.01-acre property is located in the northeast portion of the golf course.

Figure 1 - Subject Parcel

#### PLANNING ANALYSIS

Chapter 51 of the City Code establishes standards for SSTS. Section 51.03(3) requires a minimum setback of 30 feet from all property lines, wetlands and the nearest edge of any roadway easement. The applicant's plan does not show the exact setback dimension, but the rock bed would be approximately 15 feet from the east lot line where 30 feet is required. Additionally, the grading for the mound will extend into the golf course property. The applicant has been working with the golf course to obtain an easement for this encroachment. The easement document included in the packet must be reviewed by the City Attorney and recorded at the County.

#### Variance Standards

Section 51.02(11) of the Code says "Where conditions prevent the construction, alteration, and/or repair of a sewage treatment system in strict compliance with the requirements of this chapter, the property owner may apply for a variance following the procedures outlined in North Oaks City Code Sections 151.078 & 151.079."

Section 151.078 of the Zoning Code requires that the following criteria be considered and a variance only be granted when it is demonstrated that following standards have all been met:

northoaks@northoaksmn.gov www.northoaksmn.gov

(1)(a) Their strict enforcement would cause practical difficulties because of circumstances unique to the individual land under consideration, and the variances shall be granted only when it is demonstrated that the actions will be in keeping with the spirit and intent of this chapter.

The size and shape of the existing 1.01acre lot of record precludes another location for a new septic on this site and creates a practical difficulty. The location of the well, water supply lines, structures, street and the existing cesspools leave only this location for a new septic system.

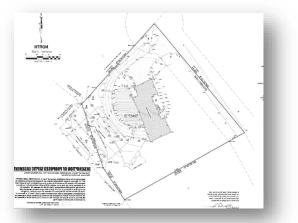

Figure 2-Site Plan

b) PRACTICAL DIFFICULTIES means the land in question cannot be put to a reasonable use if used under conditions allowed by the official controls, the plight of the land owner is due to circumstances unique to the land in question which were not created by the land owner, and the variance, if granted, will not alter the essential character of the locality.

The size and shape of the existing lot of record does not have another location for a new septic on this site and creates a practical difficulty. The location of water supply lines, structures, and the existing cesspools leave only this location for a new septic system. Approving the variance will allow construction of a new septic system and abandonment of the non-compliant system. It would not alter the essential character of the locality.

(c) Economic considerations alone shall not constitute an undue hardship if reasonable use for the land exists under the terms of this chapter.

The variance requested is to replace a failing system. The variance is not based on economic considerations alone.

(d) A variance may not be granted for any use that is not permitted under this chapter for land in the zone where the affected person's land is located.

The variance would allow a new septic system. It would not allow a use that is not permitted by City Code.

p 651-792-7750 f 651-792-7751

northoaks@northoaksmn.gov www.northoaksmn.gov 100 Village Center Drive, Suite 230 North Oaks, MN 55127

(2) Subject to the above, a variance may be granted only in the event that all of the following circumstances exist:

(a) Unique circumstances apply to the which do not generally apply to other land in the same zone or vicinity, and result from lot size or shape, topography, or other circumstances over which the owners of the land have no control;

The circumstances of this site do not apply to other properties in same zone and are the result of the small lot size, topography and existing conditions on this lot.

(b) The proposed uses is reasonable;

The proposed use is reasonable. It will allow replacement of the failing system with a new septic system.

(c) That the unique circumstances do not result from the actions of the applicant;

The circumstances do not result from the action of the applicant. The existing septic system has failed and must be replaced.

(d) That granting the variance requested will not confer on the applicant any special privilege that is denied by this chapter to other lands, structures, or buildings in the same district;

Granting the variance will not confer upon the applicant any special privilege. It will simply allow them to replace their failing system.

(e) That the Variance requested is the minimum variance which would alleviate the practical difficulties;

The variance is the minimum action needed to alleviate the practical difficulties on site.

(f) The proposed variance will not impair an adequate supply of light and air to adjacent land, or substantially increase the congestion of the roads and streets, or increase the danger of fire, or endanger the public safety, or substantially diminish or impair property values within the neighborhood; and

The proposed variance will not impair an adequate supply of light and air to adjacent land, or substantially increase the congestion of the roads and streets, or increase the danger of fire, or endanger the public safety, or substantially diminish or impair property values within the neighborhood.

northoaks@northoaksmn.gov www.northoaksmn.gov

(g) At no time after the land became nonconforming was the property under common ownership with contiguous land, the combination of which could have been used to reduce or avoid the nonconformity of the land.

At no time after the land became nonconforming was the property under common ownership with contiguous land, the combination of which could have been used to reduce or avoid the nonconformity of the land.

8

9

100 Village Center Drive, Suite 230 North Oaks, MN 55127

#### STAFF RECOMMENDATION

Based on the preceding review, Staff recommends approval of the variance based on the finding that the variance standards are met and that the new system will result in improvements to the local ground and surface waters by eliminating a non-compliant cesspool.

#### PLANNING COMMISSION OPTIONS

In consideration of the variance application, the Planning Commission has the following options:

- A) Recommend approval of the application with conditions, based on the applicant's submission, the contents of this report, public testimony and other evidence available to the Planning Commission.
  - This option should be utilized if the Planning Commission finds the proposal adheres • to all City Code requirements or will do so with conditions.
- B) Recommend denial of the application with findings for denial clearly articulated.
- C) Recommend continuance of the application review based on the need for more information in which to process the request.

100 Village Center Drive, Suite 230 North Oaks, MN 55127

### Thomas Romanko

6 Badger Lane North Oaks, MN 55127 651-261-9120

February 12, 2024

To: Kevin Kress, City of North Oaks

Subject: Variance Request for the installation of a new septic system

The original septic system (circa 1968) at 6 Badger Lane is no longer functioning properly and needs to be replaced. Due to the property soil makeup, uneven ground/slopes, setbacks and large area needed for new septic system designs, there were very limited locations for the new system. With the proposed location (east side of the property), the above ground septic system drain mound slope goes onto the North Oaks Golf Course property. I have been informed a variance from the City of North Oaks and an easement from the golf course are required.

People and companies involved in determining the location include:

- Steve Schirmer Septic Testing Inc. (Septic Design)
- Mike Capra Capra's Utilities Inc. (Septic installation)
- Chris from Midwest Sewer (representing North Oaks Inspection)

Other parties involved:

- Pat Markley North Oaks Golf Course
- E. G. Rud Surveyors
- Wynn Curtiss Chestnut Cambronne (attorney)
- Kevin Kress City of North Oaks
- Brian Humpal (representing North Oaks Inspection)

The site plan for the septic system is defined in the included surveyor documents:

- CERT OF SURVEY Romanko 6 Badger Lane
- DESCRIPTION SEPTIC EASEMENT Romanko 6 Badger Lane

A DECLARATION OF GRANT OF EASEMENT with North Oaks Golf Course has been approved and signed by the President of N.O. Golf Club and the Notary Public on January 25, 2024.

Steven B. Schirmers – 951 Katydid Lane NE – St. Michael, MN 55376 Cert. No 627 – State License #394 – Phone 763-497-3566 – Fax 763-497-5011 www.sptesting.wastewater@comcast.net – <u>schirmerswastewater.com</u>

September 11, 2023

Tom & Kim Romanko 6 Badger Lane North Oaks, MN

This site has an existing on-site wastewater treatment system consisting of a cesspool & 2 seepage pits (tanks with no bottoms). These tanks are classified as non-compliant under Minnesota Chapter 7080 rules. The tanks will need to be abandoned, pumped & filled with soil. A tank abandonment report will need to be completed by a licensed contractor.

This onsite sewage treatment system is designed for a Type 1, system, Type 1, 4 bedroom home in accordance with the Minnesota Pollution Control Agency chapter 7080 & local ordinances.

An Easement agreement will be needed with North Oaks Golf Course which includes 30' east of the down slope toe of the mound. The absorption area (5' downslope of the rock bed) & the rock bed at the north end of the system is 15' from the East property line.

The soils on this site are a sandy loam. The seasonally saturated soils (mottled soil were present a depth of 30" to 48". A pressurized mound system will be installed. The bottom of the treatment area must be located at least 3' above mottled soil.

A pumping chamber will need to be installed to lift the effluent to the treatment area. The power supply & switches must be located outside the manhole & pumping chamber in a weather proof enclosure. A warning device must be installed with a light & sound device, this is in case of a pump failure.

The manifold & supply line must have back drainage to the pumping chamber. Be sure the rock & sand fill material are clean. The sod layer below the entire mounded area must be turned over, just break up the sod.

All property lines must be located prior to installation.

If the tanks have less than 2' of cover, the lids, risers & maintenance hole covers must be insulated to a value of R10.

Cleanouts for each lateral with a sweep must be insulated & be accessible from finished grade in an irrigation box with a ball valve.

All neighboring wells are located greater than 100' away from the proposed treatment area.

Keep all heavy equipment off of the proposed treatment area before and after construction. New construction sites must be fenced off prior to starting construction of the home. The treatment area should be marked off before construction. This design is not valid & the system will need to be relocated if failure to protect the sites for new on-site sewage systems.

Install inspection pipes, one to the bottom of the rock & 1 to the bottom of the sand.

#### **MANAGEMENT PLAN:**

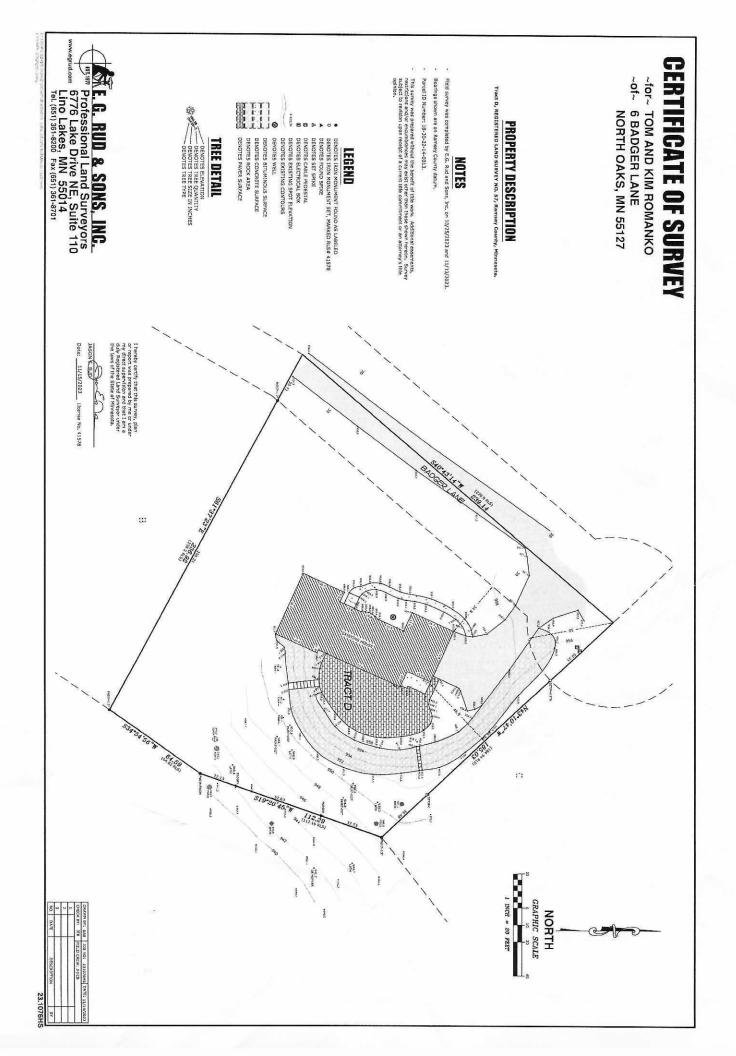

The tanks need to be maintained at a minimum of 1 time every 2 years, check with your pumper to set up a schedule.

System inspected for areas of wetness by owner & or Inspector as determined by the local unit of Government.

Any other requirements as determined by the local unit of Government.

With proper installation & maintenance, this system should have no problem in treating septic effluent effectively. Nothing other than human waste, toilet tissue, laundry, showers, water softners etc. should be disposed of into the system. Garbage disposals are not recommended. Excessive amounts of soaps, antibacterial soaps, cleaning agents, shower cleaners used every shower & chlorine agents may kill the bacteria needed to treat septic effluent. Additives are not recommended. PAINTS, STAINS, ET.C MUST NOT GO DOWN THE DRAINS. Recommend laundering be limited to 3 to 4 loads per day. <u>IRON FILTERS MUST NOT DISCHARGE INTO THE SYSTEM</u>.

**Steven B. Schirmers**

1	14.0 ft +	50.0 ft + 14.0 ft = 78.1 ft						

Mound Materials Worksheet

Project ID:	v 03.15.2023	3								
A. Rock Volume : (Rock Below Pipe + Rock to cover pipe (pipe c		<u>,</u>								
	ft X 10.0 ft = 388.8 cu.ft									
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	388.8 cu.ft ÷ 27 = 14.4 cu.yd									
Add 30% for constructability:	14.4 cu.yd X 1.3 = 18.7 cu.yd									
B. Calculate Clean Sand Volume:										
Volume Under Rock bed : Average Sand Depth × Media Wid	Ith x Media Length = cubic feet									
1.8 ft X 10										
For a Mound on a slope from 0-1%		7								
Volume from Length = ((Upslope Mound Height - 1) X Absorp	ption Width Beyond Bed X Media Bed Length)	1								
ft - 1) X X	ft =									
Volume from Width = ((Upslope Mound Height - 1) X Absorp										
ft - 1) X X	ft =									
Total Clean Sand Volume : Volume from Length + Volume f										
	cu.ft + cu.ft = cu.ft									
For a Mound on a slope greater than 1%										
Upslope Volume: ((Upslope Mound Height - 1) $\times$ 3 $\times$ Bed Let ((3.1 ft - 1) $\times$ 3.0 ft										
	X 50.0 ) ÷ 2 = 156.0 cu.ft									
Downslope Volume : ((Downslope Height - 1) x Downslope A ((4.7) ft - 1) x 5.										
Endslope Volume: (Downslope Mound Height - 1) x 3 x Mer (4.7 ft - 1) X 3.0 ft										
	X 10.0 $ft = 110.4$ cu.ft									
Total Clean Sand Volume : Upslope Volume + Downslope Volume - Downslope Volume + Downslope + Downs										
156.0cu.ft +460.0cu.ft +110	0.4 cu.ft + 900.0 cu.ft = 1626.4 cu.ft									
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	1626.4 cu.ft ÷ 27 = 60.2 cu.yd									
Add 30% for constructability:	60.2 cu.yd X 1.3 = 78.3 cu.yd									
C. Calculate Sandy Berm Volume:										
Total Berm Volume (approx.): ((Avg. Mound Height - 0.5 ft           (3.9         -         0.5         )ft X         44.										
Total Mound Volume - Clean Sand volume -Rock Volume = c 5930.2 cu.ft - 1626										
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	3915.1 cu.ft ÷ 27 = 145.0 cu.yd									
Add 30% for constructability:	145.0 $yd^3 \times 1.3 = 188.5$ cu.yd									
D. Calculate Topsoil Material Volume: Total Mound Width X To	D. Calculate Topsoil Material Volume: Total Mound Width X Total Mound Length X .5 ft									
44.9 ft X 78.	.1 ft X 0.5 ft = 1754.5 cu.ft									
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	1754.5 cu.ft ÷ 27 = 65.0 cu.yd									
Add 30% for constructability:	65.0 cu.yd X 1.3 = 84.5 cu.yd									

Mound Materials Worksheet

Project ID:	v 03.15.2023								
A. Rock Volume: (Rock Below Pipe + Rock to cover pipe (pipe outside dia + ~2 inch)) X Bed Length X Bed Width = Volume									
( <u>9</u> in + 0.3 in) ÷ 12 X 50.0 ft	t X 10.0 ft = 388.8 cu.ft								
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	388.8 cu.ft ÷ 27 = 14.4 cu.yd								
Add 30% for constructability:	14.4 cu.yd X 1.3 = 18.7 cu.yd								
B. Calculate Clean Sand Volume:									
Volume Under Rock bed : Average Sand Depth x Media Width	h x Media Length = cubic feet								
1.8 ft X 10.0	0 ft X 50 ft = 900 cu.ft								
For a Mound on a slope from 0-1%									
Volume from Length = ((Upslope Mound Height - 1) X Absorpt									
ft - 1) X X	ft =								
Volume from Width = ((Upslope Mound Height - 1) X Absorpti									
	ft =								
Total Clean Sand Volume : Volume from Length + Volume fro									
	u.ft +cu.ft =cu.ft								
For a Mound on a slope greater than 1% Upslope Volume : ((Upslope Mound Height - 1) x 3 x Bed Len	$aath) \div 2 = cubic foot$								
((3.1  ft - 1)  X 3.0  ft)	X = 50.0 ) ÷ 2 = 156.0 cu.ft								
Downslope Volume : ((Downslope Height - 1) x Downslope Ab									
(( <u>4.7</u> ft - 1) X <u>5.0</u>									
Endslope Volume : (Downslope Mound Height - 1) x 3 x Medi	) / /								
(4.7 ft - 1) X 3.0 ft	X = 10.0 ft = 110.4 cu.ft								
Total Clean Sand Volume : Upslope Volume + Downslope Vol									
156.0 cu.ft + 460.0 cu.ft + 110.4									
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	1626.4 cu.ft ÷ 27 = 60.2 cu.yd								
Add 30% for constructability:	60.2 cu.yd X 1.3 = 78.3 cu.yd								
C. Calculate Sandy Berm Volume:									
Total Berm Volume (approx.): ((Avg. Mound Height - 0.5 ft to									
( <u>3.9</u> - 0.5 )ft X 44.9									
Total Mound Volume - Clean Sand volume -Rock Volume = cu									
6641.1 cu.ft - 1626.	4 cu.ft - 388.8 cu.ft = 4626.0 cu.ft								
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	4626.0 cu.ft ÷ 27 = 171.3 cu.yd								
Add 30% for constructability:	171.3 $yd^3 \times 1.3 = 222.7$ cu.yd								
D.Calculate Topsoil Material Volume: Total Mound Width X Total Mound Length X .5 ft									
44.9 ft X 87.4	ft X 0.5 ft = 1964.8 cu.ft								
Divide cu.ft by 27 cu.ft/cu.yd to calculate cubic yards:	1964.8 cu.ft ÷ 27 = 72.8 cu.yd								
Add 30% for constructability:	72.8 cu.yd X 1.3 = 94.6 cu.yd

### **13-76** SECTION 13: Forms and Reference

### UNIVERSITY Septic System Best OF MINNESOTA **Management Practices**

Septic systems protect human health and the environment by safely recycling wastewater and returning it to the natural environment. It is your job as the homeowner to be sure this happens effectively and safely. As with your car, regular maintenance and attention is needed to keep it operating efficiently in a cost effective manner.

#### Septic Tank

#### Functions:

- Separates into three layers: scum (stuff that floats), sludge (stuff that sinks), and the liquid.
- The solids and scum are held until removed by the maintainer. Anaerobic bacteria work to break down wastes, prepare the liquid for the drainfield.
- The liquid is delivered to the soil treatment area to complete the treatment process.
- If solids are not removed, they can end up in the soil treatment area, causing (often irreparable) damage.
- · Factors that increase frequency of pumping: use of garbage disposal, water treatment unit that discharges into the septic system, in-home daycare or other reason a large number of people are present most of the time, laundry on the 2nd floor, excessive use of water and strong cleaning products.

#### **Best management practices:**

- · Tanks need to be evaluated every two to three years and pumped if necessary. Some counties require pumping on a specified basis. New homes-pump within 3-12 months of occupancy the first time.
- <u>Never</u> allow a tank to be cleaned through the inspection pipe. This is not allowed by code, and it does not allow a good cleaning to occur. Scum can plug the baffle, baffles can be knocked off. Tanks should only be cleaned through the manhole or maintenance hole.
- Be sure baffles, effluent screen, pumps and other components are inspected when the tank is pumped.
- Install risers on the manhole covers to allow easier access. Insulate the cover and secure tightly.
- An effluent screen will prevent most solids from reaching the soil treatment area. Install and clean according to manufacturer recommendations.
- Never use additives. The cleaners are harmful to your system. They do not replace good management practices. Starters and feeders are not effective.
- Warning: NEVER go into a septic tank-there are dangerous gases and no oxygen!
- Do not ignore alarms-troubleshoot the problem.

-----

#### Soil Treatment Area: Trench or Mound Functions:

- Soil organisms destroy pathogens (bacteria, viruses).
- Remove phosphorus, reduce nitrogen content.
- Recycle clean water into the soil and ground water. Water and nutrients enter the ground water, evaporate through plants, and are used by plants.

#### Best management practices:

- · Maintain vegetative cover (turf grass, native grasses, flowers). Mow, but do not fertilize, burn or over-water.
- · Keep all vehicles, bikes, snowmobiles, etc. off.
- Do not plant trees or shrubs near drainfield.
- Inspect for cracked, missing inspection pipe covers.
- · Follow practices to prevent freezing, including
- mulching the entire system if needed.

#### **Household Best Management Practices** Manage water use:

- · Repair all leaking faucets, toilets, fixtures.
- · Change to low flow toilets, shower heads,
- Replace appliances with low water use models.
- Spread water uses evenly throughout the day and week ... .
- Re-route clean water sources: water softener, treatment unit recharge water, high efficiency furnace drip, sump pumps to separate drainage area.

Watch what goes down the drain:

- The toilet is not a garbage can—nothing should be flushed except human waste and toilet paper.
- Excess medications—return to pharmacy or land-fill.
- Limit or eliminate drain cleaner use.
- Do not use automatic toilet cleaners, disposable brushes.
- Do not use every-use or automatic shower cleaners. • No hazardous waste, paints, solvents, chemicals. Use
- disposable paint brushes.
- Eliminate or limit use of garbage disposal.
- No chlorine treated water such as from hot tubs. Manage product use:
  - Minimize use of anti-bacterial soaps, cleansers.
  - Detergents: measure accurately, use as little as possible.
  - Limit use of bleach-based cleansers.

Septage-the solids from the tank are usually land-applied. Lime is added in the truck to destroy pathogens and help control odors. Septic pumpers must follow strict guidelines to protect public safety and water quality. Septage disposal is managed by the MN Pollution Control Agency (MPCA) and the Environmental Protection Agency (EPA).

For more information: Order the Septic System Owner's Guide. Call 800-876-8636 or go to http://shop.extension.umn.edu. Onsite Sewage Treatment Program web site: http://septic.umn.edu. University of Minnesota Extension http://www.extension.umn.edu.

### University of Minnesota

### Septic System Management Plan for Below Grade Systems

The goal of a septic system is to protect human health and the environment by properly treating wastewater before returning it to the environment. Your septic system is designed to kill harmful organisms and remove pollutants before the water is recycled back into our lakes, streams and groundwater.

This **management plan** will identify the operation and maintenance activities necessary to ensure long-term performance of your septic system. Some of these activities must be performed by you, the homeowner. Other tasks must be performed by a licensed septic maintainer or service provider. However, it is YOUR responsibility to make sure all tasks get accomplished in a timely manner.

The University of Minnesota's Septic System Owner's Guide contains additional tips and recommendations designed to extend the effective life of your system and save you money over time.

Proper septic system design, installation, operation and maintenance means safe and clean water!

Property Owner LUM 4 KIM ROMANKO	
Property Address # 6 BADDER LA. NO. OKCS	Property ID
System Designer S-FRESCING INIC.	Phone 763-497-3566
System Installer	Phone
Service Provider/Maintainer	Phone
Permitting Authority CHLOF MU. 0445	Phone 651-484-5177
Permit #	Date Inspected

Keep this Management Plan with your Septic System Owner's Guide. The Septic System Owner's Guide includes a folder to hold maintenance records including pumping, inspection and evaluation reports. Ask your septic professional to also:

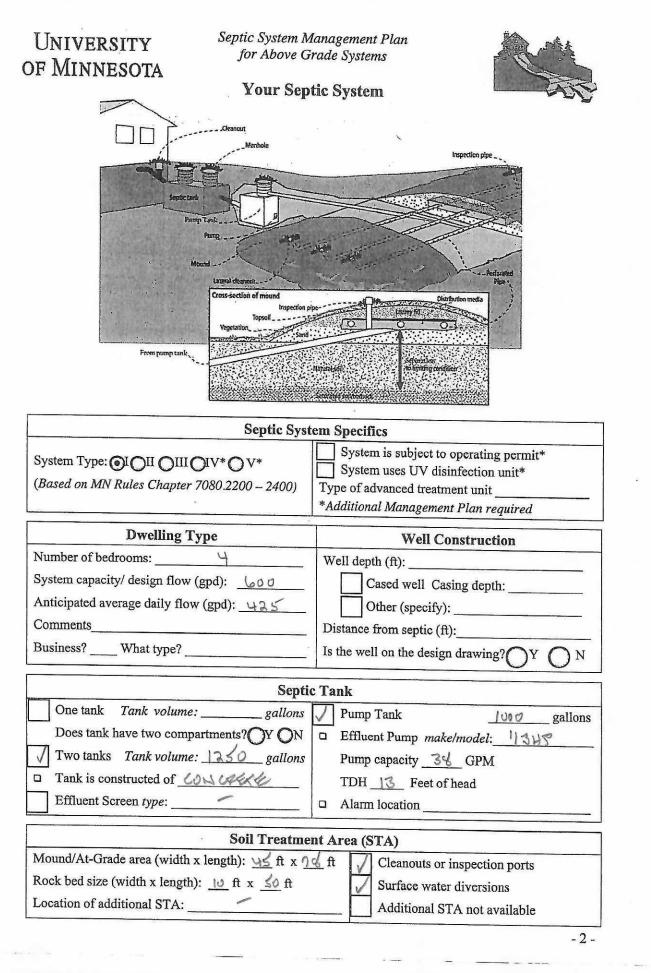

- Attach permit information, designer drawings and as-builts of your system, if they are available.
- Keep copies of all pumping records and other maintenance and repair invoices with this document.
- Review this document with your maintenance professional at each visit; discuss any changes in product use, activities, or water-use appliances.

For a copy of the Septic System Owner's Guide, call 1-800-876-8636 or go to http://shop.extension.umn.edu/

46

### SECTION 13: Forms and Reference 13-79

UNIVERSITY OF MINNESOTA

Septic System Management Plan for Below Grade Systems

### Homeowner Management Tasks

These operation and maintenance activities are your responsibility. Use the chart on page 6 to track your activities.

Identify the service intervals recommended by your system designer and your local government. The tank assessment for your system will be the **shortest interval of these three intervals**. Your pumper/maintainer will determine if your tank needs to be pumped.

System Designer:	check every <u>24</u>	months
Local Government:	check every	months
State Requirement:	check every 36	months

My tank needs to be checked every <u>ay</u> months

Seasonally or several times per year

- Leaks. Check (listen, look) for leaks in toilets and dripping faucets. Repair leaks promptly.
- Surfacing sewage. Regularly check for wet or spongy soil around your soil treatment area. If surfaced sewage or strong odors are not corrected by pumping the tank or fixing broken caps and leaks, call your service professional. Untreated sewage may make humans and animals sick.
- Alarms. Alarms signal when there is a problem; contact your maintainer any time the alarm signals.
- Lint filter. If you have a lint filter, check for lint buildup and clean when necessary. Consider adding one after washing machine.
- Effluent screen. If you do not have one, consider having one installed the next time the tank is cleaned.

#### Annually

- Water usage rate. A water meter can be used to monitor your average daily water use. Compare your water usage rate to the design flow of your system (listed on the next page). Contact your septic professional if your average daily flow over the course of a month exceeds 70% of the design flow for your system.
- Caps. Make sure that all caps and lids are intact and in place. Inspect for damaged caps at least every fall. Fix or replace damaged caps before winter to help prevent freezing issues.
- Water conditioning devices. See Page 5 for a list of devices. When possible, program the recharge frequency based on water demand (gallons) rather than time (days). Recharging too frequently may negatively impact your septic system.
- Review your water usage rate. Review the Water Use Appliance chart on Page 5. Discuss any major changes with your pumper/maintainer.

#### During each visit by a pumper/maintainer

- Ask if your pumper/maintainer is licensed in Minnesota.
- Make sure that your pumper/maintainer services the tank through the manhole. (NOT though a 4" or 6" diameter inspection port.)
- Ask your pumper/maintainer to accomplish the tasks listed on the Professional Tasks on Page 4.

47

2

### University of Minnesota

Septic System Management Plan for Below Grade Systems

### **Professional Management Tasks**

These are the operation and maintenance activities that a pumper/maintainer performs to help ensure long-term performance of your system. Professionals should refer to the O/M Manual for detailed checklists for tanks, pumps, alarms and other components. Call 800-322-8642 for more details.

Written record provided to homeowner after each visit.

#### **Plumbing/Source of Wastewater**

- Review the Water Use Appliance Chart on Page 5 with homeowner. Discuss any changes in water use and the impact those changes may have on the septic system.
- Review water usage rates (if available) with homeowner.

#### Septic Tank/Pump Tanks

- *Manhole lid.* A riser is recommended if the lid is not accessible from the ground surface. Insulate the riser cover for frost protection.
- Liquid level. Check to make sure the tank is not leaking. The liquid level should be level with the bottom of the outlet pipe. (If the water level is below the bottom of the outlet pipe, the tank may not be watertight. If the water level is higher than the bottom of the outlet pipe of the tank, the effluent screen may need cleaning, or there may be ponding in the drainfield.)
- · Inspection pipes. Replace damaged caps.
- Baffles. Check to make sure they are in place and attached, and that inlet/outlet baffles are clear of buildup or obstructions.
- *Effluent screen*. Check to make sure it is in place; clean per manufacturer recommendation. Recommend retrofitted installation if one is not present.
- Alarm. Verify that the alarm works.
- Scum and sludge. Measure scum and sludge in each compartment of each septic and pump tank, pump if needed.

#### Pump

- Pump and controls. Check to make sure the pump and controls are operating correctly.
- Pump vault. Check to make sure it is in place; clean per manufacturer recommendations.
- Alarm. Verify that the alarm works.
- Drainback. Check to make sure it is operating properly.
- Event counter or run time. Check to see if there is an event counter or run time log for the pump. If there is one, calculate the water usage rate and compare to the anticipated average daily flow listed on Page 2.

#### Soil Treatment Area

- Inspection pipes. Check to make sure they are properly capped. Replace caps that are damaged.
- Surfacing of effluent. Check for surfaced effluent or other signs of problems.
- *Gravity trenches and beds.* Check the number of gravity trenches with ponded effluent. Identify the percentage of the system in use. Determine if action is needed.
- Pressure trenches and beds Lateral flushing. Check lateral distribution; if cleanouts exist, flush and clean as needed.

#### All other components - inspect as listed here:

Septic System Management Plan for Below Grade Systems

# Water-Use Appliances and Equipment in the Home

Appliance	Impacts on System	Management Tips
Garbage disposal	<ul> <li>Uses additional water.</li> <li>Adds solids to the tank.</li> <li>Finely-ground solids may not settle. Unsettled solids can exit the tank and enter the soil treatment area.</li> </ul>	<ul> <li>Use of a garbage disposal is not recommended.</li> <li>Minimize garbage disposal use. Compost instead.</li> <li>To prevent solids from exiting the tank, have your tank pumped more frequently.</li> <li>Add an effluent screen to your tank.</li> </ul>
Washing machine	<ul> <li>Washing several loads on one day uses a lot of water and may overload your system.</li> <li>Overloading your system may prevent solids from settling out in the tank. Unsettled solids can exit the tank and enter the soil treatment area.</li> </ul>	<ul> <li>Choose a front-loader or water-saving top-loader, these units use less water than older models.</li> <li>Limit the addition of extra solids to your tank by using liquid or easily biodegradable detergents.</li> <li>Install a lint filter after the washer and an effluent screen to your tank</li> <li>Wash only full loads.</li> <li>Limit use of bleach-based detergents.</li> <li>Think even – spread your laundry loads throughout the week.</li> </ul>
2 <sup>nd</sup> floor laundry	<ul> <li>The rapid speed of water entering the tank may reduce performance.</li> </ul>	<ul> <li>Install an effluent screen in the septic tank to prevent the release of excessive solids to the soil treatment area.</li> <li>Be sure that you have adequate tank capacity.</li> </ul>
Dishwasher	<ul> <li>Powdered and/or high-phosphorus detergents can negatively impact the performance of your tank and soil treatment area.</li> <li>New models promote "no scraping". They have a garbage disposal inside.</li> </ul>	<ul> <li>Use gel detergents. Powdered detergents may add solids to the tank.</li> <li>Use detergents that are low or no-phosphorus.</li> <li>Wash only full loads.</li> <li>Scrape your dishes anyways to keep undigested solids out of your septic system.</li> </ul>
Grinder pump (in home)	• Finely-ground solids may not settle. Unsettled solids can exit the tank and enter the soil treatment area.	<ul> <li>Expand septic tank capacity by a factor of 1.5.</li> <li>Include pump monitoring in your maintenance schedule to ensure that it is working properly.</li> <li>Add an effluent screen.</li> </ul>
Large bathtub (whirlpool)	<ul> <li>Large volume of water may overload your system.</li> <li>Heavy use of bath oils and soaps can impact biological activity in your tank and soil treatment area.</li> </ul>	<ul> <li>Avoid using other water-use appliances at the same time. For example, don't wash clothes and take a bath at the same time.</li> <li>Use oils, soaps, and cleaners in the bath or shower sparingly.</li> </ul>
Clean Water Uses	Impacts on System	Management Tips
High-efficiency furnace	• Drip may result in frozen pipes during cold weather.	• Re-route water into a sump pump or directly out of the house. Do not route furnace recharge to your septic system.
Water softener Iron filter Reverse osmosis	<ul> <li>Salt in recharge water may affect system performance.</li> <li>Recharge water may hydraulically overload the system.</li> </ul>	<ul> <li>These sources produce water that is not sewage and should not go into your septic system.</li> <li>Reroute water from these sources to another outlet, such as a dry well, draintile or old drainfield.</li> </ul>
Surface drainage Footing drains	• Water from these sources will likely overload the system.	<ul> <li>When replacing, consider using a demand-based recharge vs. a time-based recharge.</li> <li>Check valves to ensure proper operation; have unit serviced per manufacturer directions</li> </ul>

#### DECLARATION OF GRANT OF EASEMENTS FOR INGRESS, EGRESS AND ENCROACHMENT

This Declaration of Grant of Easements for Ingress, Egress and Encroachment ("Declaration ") is made this \_\_\_\_\_ day of January, 2024, by North Oaks Golf Club, Inc., a Minnesota corporation, hereinafter referred to as Grantor.

WHEREAS, this Declaration involves certain real property located in the City of North Oaks, County of Ramsey, State of Minnesota, owned by the Grantor and legally described on Exhibit A attached hereto:

(the Burdened Parcel);

WHEREAS, Thomas and Kim Romanko (together, the "Grantee") own real property located in the City of North Oaks, County of Ramsey, State of Minnesota, legally described on Exhibit B attached hereto:

(the "Benefited Property," which together with the Burdened Property are each a "Lot" and together the "Lots");

WHEREAS, the Lots abut each other;

WHEREAS, the Grantee desires and intends to install on the Benefited Property a new septic system (the "System") to replace the existing septic system;

WHEREAS, current legal requirements related to the System require that it be located on the Benefited Property so that its drain field would extend into a portion of the Burdened Property;

WHEREAS, the Grantee desires to obtain and the Grantor is willing to grant an

easement to the Grantee over a portion of the Burdened Property to facilitate and allow

for the installation, maintenance and repair of the System;

G 15

NOW, THEREFORE, subject to the terms and conditions hereof, this

Declaration is hereby duly made, executed, and recorded.

#### ARTICLE I DEFINITIONS

A. <u>Defined Terms</u>. Reference in this Declaration to the following terms shall mean:

1. <u>Owner(s)</u>. For purposes of this Declaration, an "Owner" shall be the Grantor and its successors as the recorded fee simple owner of the Burdened Parcel and "Owner" shall be the Grantee and its successors as the recorded fee simple owner of the Benefited Parcel. In the event any Lot is owned or deemed to be owned by more than one Person, such Person shall constitute one Owner, but shall be jointly and severally obligated under this Declaration.

2. <u>Permittee(s)</u>. Owners and their respective employees, agents, contractors, customers, vendors, suppliers, visitors, invitees and licensees, including but not limited to any person performing installation, maintenance or repair of the System.

3. <u>Person(s)</u>. Individuals, partnerships, limited liability companies, corporations, trusts or any other form of business or government entity.

4. <u>Easement Area.</u> The Easement Area means that part of the Burdened Property legally described in Exhibit C and depicted on the attached Exhibit D.

5. <u>Encroachment</u>. The portion of the System drain field located within the Easement Area.

#### ARTICLE II EASEMENT

2.1 <u>GRANT OF EASEMENT.</u> Subject to any express conditions, limitations or reservations contained herein, Grantor hereby declares that the Lots and all Owners, Occupants and Permittees of the Lots shall be benefited and burdened by the following nonexclusive, perpetual easements which are hereby imposed upon the Burdened Parcel and all present and future Owners, Occupants and Permittees of the Burdened Parcel:

A. <u>PEDESTRIAN INGRESS AND EGRESS EASEMENT</u>. As a benefit for the Benefited Parcel, Grantor hereby grants and conveys to each Owner of the Benefited Parcel for its use and for the use of its Permittees, a non-exclusive, perpetual easement for pedestrian traffic over and across the Easement Area for the purpose of installation, repair and maintenance of the System.

St 185

B. ENCROACHMENT EASEMENT. As a benefit for the Benefited Parcel, Grantor hereby grants and conveys to each Owner of the Benefited Parcel for its use a non-exclusive, perpetual easement to install and maintain the Encroachment on the Burdened Parcel. Such easement rights, if any, shall be subject to the following reservations as well as other provisions contained in this Declaration.

1. The Encroachment may be continued, repaired and maintained but may not under any circumstances be increased or expanded.

2.2. **REASONABLE USE OF EASEMENTS.** The easements herein granted shall be used and enjoyed by each Owner, Occupant and Permittee in such a manner as not to unreasonably interfere with, obstruct or delay the conduct and operations of the business at any time conducted on the Lot of the Grantor or any other Owner, Occupant or Permittee of the Burdened Property.

#### ARTICLE III REMEDIES AND ENFORCEMENT

3.1. EOUITABLE REMEDIES. In the event of a breach or threatened breach by any Owner or its Permittees of any of the terms, covenants, restrictions or conditions of this Declaration, any Owner shall, in addition to any other available remedy, be entitled forthwith to full and adequate relief by injunction and/or all such other equitable remedies from the consequences of such breach, including specific performance. In addition to any and all other remedies, an Owner successfully enforcing this Declaration shall be entitled to recover from a breaching Owner the costs incurred to enforce the Declaration, including reasonable attorney fees.

#### ARTICLE IV MISCELLANEOUS

4.1 <u>COVENANTS RUNNING WITH THE LAND</u>. It is intended that each of the easements, covenants, conditions and restrictions described and set forth in this Declaration shall run with the Lots and create equitable servitudes in favor of the real property benefited hereby, shall bind every Owner and/or other person or entity now or hereafter having any fee, leasehold or other interest therein and shall inure to the benefit of the respective parties and their successors, assigns, heirs and personal representatives.

#### 4.2 CONSTRUCTION AND INTERPRETATION.

H (4

(A) This Declaration and any Exhibits hereto contain all the representations and the entire agreement between the parties executing the Declaration with respect to the subject matter thereof.

(B) Whenever required by the context of this Declaration, (i) the singular shall include the plural, and vice versa, and the masculine shall include the feminine and neuter genders, and vice versa and (ii) use the words "including," "such as" or words of similar import, when following any general items, whether or not language of non-limitation, such as "without limitation," or "but not limited to," are used with reference thereto, but rather shall be deemed to refer to all other items or matters that could reasonably fall within the broadest scope of such statement, terms or matter.

(C) The captions preceding the text of each article and section are included only for convenience of reference. Captions shall be disregarded in the construction and interpretation of this Declaration. Capitalized terms are also selected only for convenience of reference and do not necessarily have any connection to the meaning that might otherwise be attached to such term in a context outside of this Declaration.

(D) Invalidation of any of the provisions contained in this Declaration, or of the application thereof to any person by judgment or court order shall in no way affect any of the other provisions hereof or the application thereof to any other person and the same shall remain in full force and effect.

(E) This Declaration may be amended by, and only by, a written agreement signed by the Owners and shall be effective only when recorded in the county and state where the Lots are located; provided, however, that no such amendment shall impose any materially greater obligation on, or materially impair any right of an Owner or its Lot without the consent of such Owner. No consent to the amendment of this Declaration shall ever be required of any Occupant or Person other than the Owners, nor shall any Occupant or Person other than the Owners have any right to enforce any of the provisions hereof.

4.3 <u>NO WAIVER</u>. The failure of any Owner to insist upon strict performance of any of the terms, covenants or conditions hereof shall not be deemed a waiver of any rights or remedies which that Owner may have hereunder, at law or in equity and shall not be deemed a waiver of any subsequent breach or default in any of such terms, covenants or conditions.

4.4 <u>GOVERNING LAW.</u> The laws of the State of Minnesota shall govern the interpretation, validity, performance and enforcement of this Declaration.

4

IN WITNESS WHEREOF, the undersigned has executed this Declaration.

March 22, 2024 VARIANCE 24-03 Thomas Romanko 6 Badger Lane North Oaks, MN 55127 RSL Zoning

Date Application Determined Complete:MaPlanning Commission Meeting DateMaCity Council Meeting Date:Ap60 Day Review Date:Ma

March 6, 2024 March 28, 2024 April 11, 2024 May 5, 2024

#### **Description of Request**

The applicant has requested a variance to install a subsurface sewage treatment system (SSTS), which would encroach 15 feet into the required 30-foot east property line setback.

The applicable regulations are as follows:

#### § 151.050 RSL - RESIDENTIAL SINGLE-FAMILY LOW DENSITY DISTRICT.

(F) Setbacks.

(1) No building or structure (except fences, screening, planting strips, and landscaping in compliance with Sections 151.033 and 151.034), <u>individual</u> <u>sewage treatment system</u>, or well shall be located within thirty (30) feet of the lot lines, the nearest edge of any road easement(s), or any wetland(s), except that additions which do not exceed twenty five (25) percent of the existing building footprint area, on buildings or structures lawfully existing upon the effective date of this chapter shall be excluded from wetland setback requirements.

#### Staff Review

Due to the existing cesspools, the current system would be classified as non-compliant under MPCA Rule 7080.1500 Subp. 4 (B).

Due to water supply lines, structures, impervious areas, slopes, and property lines, the space available for installing a replacement system is very limited.

Based on these facts, the staff believes the applicant has met the requirements for a variance as outlined in Section 151.078 of the code. This hardship is created by the property itself and not the result of the property owner's actions. We are in agreement with the designer, Steve Schirmers, that the proposed location of the new system is the most viable option for an SSTS. This variance would be the minimum variance, which would alleviate the practical difficulties. Additionally, the proposed system will result in a significant improvement to the local ground and surface waters.

VARIANCE 24-03 March 22, 2024 Page 2

#### Action Requested

That the Planning Commission recommends that the City Council approve Variance #24-03, allowing the applicant to encroach 15 feet into the required 30-foot east property line setback.

#### **Motions**

Motion to Approve

MOTION\_\_\_\_\_SECOND\_\_\_\_\_

That Variance #24-03, for 6 Badger Lane:

be APPROVED with the following conditions:

#### PLANNING REPORT

TO:

Kendra Lindahl, City Planner Kevin Kress, City Administrator
Bridget McCauley Nason, City Attorney Michael Nielson, City Engineer

North Oaks Planning Commission

DATE: March 28, 2024

RE: Conditional Use Permit for Building Height in Excess of 35 feet and Driveway Setback Variance at 8 Sherwood Trail

Date Application Submitted	January 25, 2024
Date Application Determined Complete:	February 2, 2024
Planning Commission Meeting Date:	February 29, 2024
60-day Review Date:	March 25, 2024
Planning Commission Meeting Date:	March 28, 2024
City Council Meeting Date:	April 11, 2024
120-day Review Date:	May 24, 2024

#### REQUEST

Mark Englund of Hanson Homes has requested approval of a conditional use permit (CUP) to allow the construction of a new home at 8 Sherwood Trail to be 44.2 feet in height where 35 feet in is the maximum height permitted in the City Code and a variance to allow a 11-foot setback from the wetland and a 25-foot setback from the side lot line where 30 feet is required for both. The applicant's narrative is attached, as well as building elevations, a survey and a site plan for the proposed structure.

The Planning Commission tabled the CUP request at the February meeting so that it could be reviewed with the variance application.

p 651-792-7750 f 651-792-7751

 $\otimes$ 

northoaks@northoaksmn.gov www.northoaksmn.gov 100 Village Center Drive, Suite 230 North Oaks, MN 55127

9

#### BACKGROUND

The site is currently undeveloped. The property is in the Nord development. Final approval for that subdivision was granted in 2022.

#### Zoning and Land Use

The property is guided Low Density residential and is zoned Residential Single Family - Low Density (RSL). Homes greater than 35 feet in height are subject to the conditional use permit (CUP) standards and process in Section 151.050(D.7) (conditional uses), Section 151.076 (CUP review criteria) and Section 151.079 (CUP procedure) of the Zoning Code.

Figure 1 - Subject Parcel

The 2.6-acre property is located along Sherwood Trail, east of the intersection of Sherwood Trail and Sherwood Road (County Road 4).

#### PLANNING ANALYSIS

#### Building Height

The applicant is requesting a CUP to allow the southern (rear) elevation of the proposed home to exceed 35 feet in height. Elevations provided by the applicant show the proposed home to be 44.2 inches in height along the side and rear facades. The front facade of the home is 34.9 feet in height. Building height is defined as the vertical distance from grade as defined herein to the top ridge of the highest roof surface in Section 151.005 of the Zoning Code.

#### Setbacks

The proposed single-family home exceeds the 30-foot minimum setback requirements at all property lines and street easements. The front elevation is set back 272.9 feet from the roadway easement. The side elevations are 50.5feet from the east property line and 55.8 feet from the west property line. The rear elevation is setback more than 200 feet from the rear property line. The building complies with the setback requirements.

Section 151.050(F)(1) requires that structures be at least 30 feet from any wetland, SSTS, well or road easement. It does not appear that the septic locations shown are in compliance with the

p 651-792-7750 f 651-792-7751

northoaks@northoaksmn.gov www.northoaksmn.gov

100 Village Center Drive, Suite 230 North Oaks, MN 55127

setback requirements. Section 153.053 requires all driveways to meet structure setbacks. The driveway does meet the required 30-foot side yard setback requirement but does not meet the 30-foto wetland setback requirement.

#### <u>Size</u>

The applicant has provided a FAR worksheet showing 8.25% FAR. Plans must be in compliance with the maximum 12% FAR requirement at the time of review by the Building Official.

#### <u>Wetlands</u>

There are two wetlands on the site. The Code requires a 30-foot setback from the wetlands and VLAWMO encourages a 30-foot wetland buffer. The Code also requires that driveways be 30-feet from the property line. A setback variance is required to construct the house at the proposed location.

The approved plans for the Nord development showed the home site at the front of the lot, which would have eliminated the need for the driveway variance. It is the applicant's responsibility to show that the practical difficulties exist, and that the mandatory criteria for issuance of a variance are met before the City Council can approve the required variance. Without a variance from the wetland and side lot line setback requirements, the house cannot be constructed as proposed.

Figure 2- preliminary plans

#### Septic

Section 51.01 of the City Code requires the plans to show the location of two septic systems, each 5,000 sq. ft. in size, which comply with setbacks and will be protected during construction. The current plan shows the home where the septic sites were shown during the approval process. The plan submitted by the applicant shows two 650 sq. ft. rock beds. This does not meet ordinance requirements. The septic sites must be a minimum of 30 feet from structures, wetlands and property lines. The current plans do not comply. The plans must be revised to show the two 5,000 sq. ft. septic sites with supporting documentation from a licensed SSTS professional.

p 651-792-7750 f 651-792-7751

northoaks@northoaksmn.gov www.northoaksmn.gov 100 Village Center Drive, Suite 230 North Oaks, MN 55127

#### Trees

At the February Planning Commission, the Commission asked for more information about the tree removal on site. City Administrator Kress noted that the tree removal was part of the subdivision approval and is complete. At the request of the Commission, the applicant has provided information from NOHOA about the required plantings.

#### **Building Height CUP**

To allow a conditional use permit for a home greater than 35 feet in height, Section 151.05(D.7) of the Zoning Code requires that the following criteria be considered:

1. The front elevation of the building does not exceed 35 feet in height at any point;

The proposed front elevation does not exceed 35 feet at any point.

2. The building height at any other elevation does not exceed 45 feet;

The building height at the rear and side elevations does not exceed 45 feet.

3. The environmental and topographical conditions of the lot prior to building development are naturally suited to the design of a building with an egress or walkout level;

Based on review of the plans, topography of the site and Ramsey County GIS, the proposed home and walkout level appear conducive to the site's natural layout in this location. Prior to construction, the City will review all erosion control measures to ensure that the construction project does not adversely affect the surrounding environment. The City Engineer will make periodic site visits during construction to ensure all erosion control measures are fully complied with.

4. Buildings shall be limited to a basement and 2 full stories. Finished areas within the roof structure will be considered a full story;

The proposed home is two full stories with a basement walkout.

5. Any time the side or rear elevations of a building exceeds 35 feet in height within 50 feet of adjacent lot lines, the building line shall be setback an additional 2 feet from the adjacent setback line for each foot in height above 35 feet; and

The home has been designed to meet the 50-foot setback.

p 651-792-7750 f 651-792-7751 northoaks@northoaksmn.gov www.northoaksmn.gov 100 Village Center Drive, Suite 230 North Oaks, MN 55127

6. Section 151.083 is complied with.

The applicant has complied with the fees associated with Section 151.083.

In addition to the standards identified for the specific CUP request, the City must also review the conditional use permit request against the standards in Section 151.076 of the City Code. Staff has reviewed the request against those standards:

1. Relationship of the proposed conditional use to the Comprehensive Plan;

The proposed use is consistent with the uses anticipated in the Comprehensive Plan and the permitted uses in the single family zoning district.

2. The nature of the land and adjacent land or building where the use is to be located;

The use is consistent with the surrounding land uses.

3. Whether the use will in any way depreciate the area in which it is proposed;

The proposed single-family should not negatively impact adjacent property values.

4. The effect upon traffic into and from the land and on adjoining roads, streets, and highways;

The proposed use will not create a traffic impact.

5. Whether the use would disrupt the reasonable use and enjoyment of other land in the neighborhood;

The proposed single-family home use will not cause a negative impact to the use and enjoyment of other land in the neighborhood.

6. Whether adequate utilities, roads, streets, and other facilities exist or will be available in the near future;

There are adequate utilities, roads, streets, and other facilities available to the property.

7. Whether the proposed conditional use conforms to all of the provisions of this chapter;

The proposed request is compliant with the City's zoning code.

8. The effect up natural drainage patterns onto and from the site;

Finished grading will work with existing drainage patterns.

7. Whether the proposed use will be detrimental to or endanger the public health, safety, comfort, convenience or general welfare of the neighborhood or the city;

The use as proposed will not be detrimental to or endanger the public health, safety, comfort, convenience or general welfare of the neighborhood or the city;

9. Whether the proposed use would create additional requirements at public cost for public facilities and services and whether or not the use will be detrimental to the economic welfare of the neighborhood or city; and

As proposed, the use will not create additional requirements at public cost for public facilities and services and will not be detrimental to the economic welfare of the neighborhood or city.

10. Whether the proposed use is environmentally sound and will not involve uses, activities, processes, materials, equipment, and conditions of operation that will be detrimental to any persons, land, or the general welfare because of excessive production of traffic, noise, smoke, fumes, wastes, toxins, glare, or orders.

Beyond initial construction activity, and based on erosion control requirements, the proposed residential use and grading activity will not be detrimental to the environment or surrounding area.

#### **Driveway Setback Variance**

The applicant has revised the request since the Planning Commission meeting in February. The current request is to allow a 25-foot driveway setback from the west property line and an 11-foot setback from wetland #9 where a 30-foot setback is required from both.

This lot was platted as part of the Nord subdivision. That subdivision plan showed building pads for all of the lots up near the street with septics in the rear yard, however, several of the adjacent lots did push the home to the back of the lot. They were able to have that flexibility because they do not have the wetlands in the middle of the lot like 8 Sherwood.

The variance being requested so that the builder can move the building pad to the back of the lot to accommodate a home with a walkout. The Planning Commission has had many

northoaks@northoaksmn.gov www.northoaksmn.gov

conversations lately about what it means for a lot to be naturally suited to the design of a building. Is it a reasonable expectation that builders can take a standard home plan and make it fit it onto any lot in North Oaks or should they be required to work with the existing site conditions? The building pad at the front of the lot could accommodate a reasonably sized home but a builder/buyer would need to be creative and develop a home plan to fit this lot. The Planning Commission must keep this question in mind when reviewing the variance request.

Section 151.078 of the Zoning Code requires that the following criteria be considered and a variance only be granted when it is demonstrated that following standards have all been met:

(1)(a) Their strict enforcement would cause practical difficulties because of circumstances unique to the individual land under consideration, and the variances shall be granted only when it is demonstrated that the actions will be in keeping with the spirit and intent of this chapter.

The applicant argues that they bought the lot, entered into a purchase agreement with a buyer and the house they want to build does not fit on the front building pad. Hanson Builders argues that this creates a practical difficulty because they cannot build a home like others they are building in the neighborhood without the driveway variance and placing this house up by the street will look out of character with the other homes in the neighborhood.

The final plans/plat for Red Forest Way South Phase 1 showed the house pad on the front of the lot. The approvals for the subdivision were based on the approved plans and due diligence as part of the land purchase should have identified this home site. The Commission could find the there is no practical difficulty and the landowner simply needs to develop a home plan that fits the lot without the need for a variance.

b) PRACTICAL DIFFICULTIES means the land in question cannot be put to a reasonable use if used under conditions allowed by the official controls, the plight of the land owner is due to circumstances unique to the land in question which were not created by the land owner, and the variance, if granted, will not alter the essential character of the locality.

Hanson Builders has provided a detailed narrative outlining what they believe are the practical difficulties that necessitate the variance. They argue that the small building pad in the front of the lot is out of character with other homes in the neighborhood and the home needs to be behind the wetlands to build the home the buyer wants. They also make the argument that that the driveway would be too steep if they built on the house pad in the front of the lot.

northoaks@northoaksmn.gov www.northoaksmn.gov

100 Village Center Drive, Suite 230

The Planning Commission must evaluate whether or not the building pad proposed by The North Oaks Company and approved by the City is a reasonable location or whether the location is not feasible and creates a practical difficulty. The Commission could agree with Hanson Builders that the house they designed does not fit on this lot, but find that is not a practical difficulty, because a different home could be designed to work with the site conditions and not require a variance. Staff believes a house could be designed for the approved building site with a driveway that complies with the maximum grade of 10%. The City Engineer is reviewing the plans and will provide comments for the Planning Commission meeting.

(c) Economic considerations alone shall not constitute an undue hardship if reasonable use for the land exists under the terms of this chapter.

The variance request is not driven solely be economic considerations, but the Commission must first answer the question of whether a practical difficulty exists that requires the home to be built on the rear of the lot triggering the need for the variance from the wetland setbacks for the new driveway.

(d) A variance may not be granted for any use that is not permitted under this chapter for land in the zone where the affected person's land is located.

The variance would not allow a use that is not permitted under this chapter.

(2) Subject to the above, a variance may be granted only in the event that all of the following circumstances exist:

(a) Unique circumstances apply to the which do not generally apply to other land in the same zone or vicinity, and result from lot size or shape, topography, or other circumstances over which the owners of the land have no control;

The two wetlands in the center of the lot are unique to this lot. The applicant's narrative argues that there are unique circumstances because placing the home near the street would be out of character with the other homes in the neighborhood and to avoid the wetlands the home needs to be moved to the rear of the lot if a walkout is to be built. If the home is moved to the back of the lot the driveway cannot be built without driveway variances.

However, the Commission could find that the approved plans showed the home site on the front of the lot with a compliant driveway grade. The City of North Oaks has many lots with wetlands and this is not a unique circumstance.

northoaks@northoaksmn.gov www.northoaksmn.gov

#### (b) The proposed uses is reasonable;

The applicant states that the proposed variance is reasonable because the building pad at the front of the site where originally approved is feasible for the home they wish to build. The proposed home is reasonable as it is a comparable size and style as the adjacent homes.

The Commission could find that in North Oaks homes should be built to the particular site conditions and expecting every lot to support every home type is not reasonable. The parcel has a buildable home site as approved with the plat and a reasonable home could be built in that location.

(c) That the unique circumstances do not result from the actions of the applicant;

Hanson Builders was not involved in the original platting or lot layouts of this development and are simply trying to work with the constraints for this lot.

Alternatively, the Commission could find that the owner had a responsibility to understand the site constraints before purchasing the lot and designing the home, circumstances of the lot are not unique to the lot and the builder has alternatives to build on this vacant lot.

## (d) That granting the variance requested will not confer on the applicant any special privilege that is denied by this chapter to other lands, structures, or buildings in the same district;

The Commission could find that the site constraints require the home to be placed on the rear of the lot, which creates the need for the driveway setback variance and granting the variance does not grant special privileges.

Alternatively, the Commission could find that the developer provided a building pad site at the front of the lot to avoid this exact circumstance and granting the variance would confer special privileges to the applicant.

(e) That the Variance requested is the minimum variance which would alleviate the practical difficulties;

The applicant argues that the variance is the minimum action needed to alleviate the practical difficulties on site because the house they want to build won't fit on the approved building pad site and that a house that could fit would be out of character with the neighborhood. The variance is the minimum action necessary to allow the builder to build the selected home plan on this lot.

northoaks@northoaksmn.gov www.northoaksmn.gov

Alternatively, the Commission could find that there is no practical difficulty because the building pad site as approved can be developed but simply requires the builder to develop a house plan that works with the existing site.

(f) The proposed variance will not impair an adequate supply of light and air to adjacent land, or substantially increase the congestion of the roads and streets, or increase the danger of fire, or endanger the public safety, or substantially diminish or impair property values within the neighborhood; and

The proposed variance will not impair an adequate supply of light and air to adjacent land, or substantially increase the congestion of the roads and streets, or increase the danger of fire, or endanger the public safety, or substantially diminish or impair property values within the neighborhood.

(g) At no time after the land became nonconforming was the property under common ownership with contiguous land, the combination of which could have been used to reduce or avoid the nonconformity of the land.

#### **SUMMARY**

Staff finds that applicant does comply with conditional use permit standards for building height in excess of 35 feet as outlined in the staff report. However, the conditional use permit is tied to the variance request, because without the driveway variance the home could not be built as proposed.

Staff has provided potential findings for approval or denial of the variance. The Planning Commission is reminded that the burden of proof is on the applicant to provide that all of the variance standards have been met. If the Planning Commission believes that all of the variance standards have been met, they should recommend approval. If the Planning Commission believes that the variance standards have not been met, they should recommend denial.

#### PLANNING COMMISSION OPTIONS

In consideration of the conditional use permit and variance application, the Planning Commission has the following options:

- A) Recommend approval of the application with conditions, based on the applicant's submission, the contents of this report, public testimony and other evidence available to the Planning Commission.
  - This option should be utilized if the Planning Commission finds the proposal adheres to all City Code requirements or will do so with conditions.
- B) Recommend denial of the application with findings for denial clearly articulated.
- C) Recommend continuance of the application review based on the need for more information in which to process the request.

#### **Proposed Conditional Use Permit**

## For Height Variance for Walkout Basement Foundation

### 8 Sherwood Trail, East Preserve Subdivision, North Oaks, MN

Our purpose in applying for a Conditional Use Permit for our proposed home at 8 Sherwood Trail in East Preserve, North Oaks is to request a height variance to make the basement a rear walkout where the natural grade drops about 9.5 feet from the garage elevation to proposed walkout elevation.

We would like to add windows and a door to the lower floor on the rear of the home to take advantage of the natural grade drop and thereby allow light and views of the woods and access to the existing rear grade. The resulting exposed building height would remain 35-feet at the front elevation and about 44.5-feet on the rear elevation from grade to ridge.

Our engineer, Sathre Bergquist, who did the overall engineering for the East Preserve subdivision, has calculated the Grading Quantities involved with this project to be +/- 30 Cubic Yards of fill.

Thank you for your consideration of this requested rear wall height variance of 9.5 feet.

Hanson Builders, Inc.

17

Variance Request 8 Sherwood Trail, Tract G North Oaks, MN

#### **Description of Variance Requested:**

Hanson Builders (license BC0004568) on behalf of Mr and Mrs Becker (future homeowners for this property), are respectfully requesting a variance of the 30-foot setback for a driveway to the side property line and/or a variance to the 30-foot buffer setback from an wetland area to a driveway.

#### Specific Location of the Variance request:

The proposed driveway would be located on lot 8 between wetland #9 and the westerly property line. Currently there is 48 feet between those two areas. We are proposing three things to get the driveway past this "pinch" point and to the house on the lot. (These will be presented later in this narrative.)

Reasoning for the Variance Request. We will address the code section 151.078 Variances and Appeals, specifically subsection (E,2):

- (a) Unique circumstances apply to the which do not generally apply to other land in the same zone or vicinity, and result from lot size shape, topography, or other circumstances over which the owners of the land have no control.
- If the home were placed on the front section of the buildable area between the wetland and the road, it would be very out of character for the rest of the development. Even though it is technically allowed to be that close to the road, no other home in Sherwood is placed that close on these deep lots (lot 8 is over 600 feet deep deep). The existing home to the west (6 Sherwood) is setback, roughly 150 feet, the home to the east (10 Sherwood) is setback, roughly 300 feet. Placing a house in front of the two small wetlands would make the house only 45 feet from the street.
- 2. No other lot in this development has two very small wetlands placed right in the middle of the typically usable lot space thus making it impossible to move the home a little further back on the lot, unless it is moved all the way back behind the wetlands.
- 3. The elevation makes putting a home on this smaller front section completely impractical. The elevation of the street is 914.0. In conforming with the rules of staying within the grades as they exist, the top of the foundation of the house would need to be 920.7 with a slight swale on the east side. That would make the high side of the driveway at 18.7% slope, with an average 13.8% from garage to street. The guideline for the city of North Oak is a maximum of 10%. Guidelines in many other cities and the professional pledge of the builder is 8%. Much over that, a driveway can become rather dangerous from a safety standpoint in the winter time in Minnesota. A 13.8%+ grade is pretty much impossible.

12. A grading plan for each "custom" lot shall be submitted with each building permit application. Proposed grades around the perimeter of the proposed homes shall meet the requirements of the state building code. Staff recommends that a minimum driveway slope of 3 percent, and a maximum of 10 percent. Details of proposed driveway sections over drainage ditch with proposed culverts shall be included in plans for building permit review to ensure grading and drainage plan is maintained.

#### (b) The proposed uses is reasonable:

The front building area is small at only about 65 feet wide and 50 feet deep. The entire lot is about 180 feet wide by 600+ deep. We had engineering verify that no other home, built or planned, in this development would fit within the building setback lines of the front buildable area as shown on lot 8. See attached exhibits for the floor plans of Sherwood 1, 2, 6, 8, 10, and 14. The only reasonable location for a home of this caliber in this neighborhood would be to have the home positioned behind the two small wetlands in question.

#### (b) That the unique circumstances do not result from the actions of the applicant:

Hanson Builders was not involved in the original platting or lot layouts of this development. We are trying to resolve the issues of the constraints for this lot.

## (c) That granting the variance requested will not confer on the applicant any special privilege that is denied by this chapter to other lands, structures, or building in the same district:

The requested variance is only applicable on this lot. None of the other lots that Hanson Builders has purchased in the community will have this same or similar situation.

## (e) That the requested variance is the minimum variance which would alleviate the practical difficulties:

We are trying to be very sensitive to propose the minimum amount of variance that will resolve the difficulties of this lot. As shown on the most current survey

We are proposing three things to solve the problems outlined and to do so with minimal impact. Per items below and attached revised survey

1. Reduce the driveway in just this area next to the wetland down to 12 feet.

2. Reduce the side setback from the side property line from 30 to 25 feet.

3. Apply the wetland buffer averaging principle to the wetland setback. The current survey shows a 11' setback on the driveway side, by then relocating that minimized frontage and replacing it on the other side of the wetland. Note on the survey shows proposed fill of 470 sqft of wetland buffer, but then creation of 555 sqft of buffer basically connecting the areas. This would be an 18% increase in overall buffer area, providing more than originally required.

# (f) The proposed variance will not impair an adequate supply of light and air to adjacent land, or substantially increase the congestion of the roads and streets, or increase the danger of fire, or endanger the public safety, or substantially diminish or impair property values within the neighborhood; and

We do not feel a driveway placement will affect any of the above concerns for air, light, congestion, fire danger. If anything, having the home setback further will increase the appeal of the neighborhood.

(g) At no time after the land became nonconforming was the property under common ownership with contiguous land, the combination of which could have been used to reduce or avoid the nonconformity of the land.

Hanson Builders purchased this lot in Sept '23 so we are not aware of any issues with the above statement. Initial home placement that was submitted (with home on rear/southern building pad) was initially reviewed with no concerns. First awareness of non-compliance was brought up on 2/9/24. A purchase agreement was written on 12/7/23 between Hanson Builders, Inc. and our clients Jeremiah and Andrea Becker.

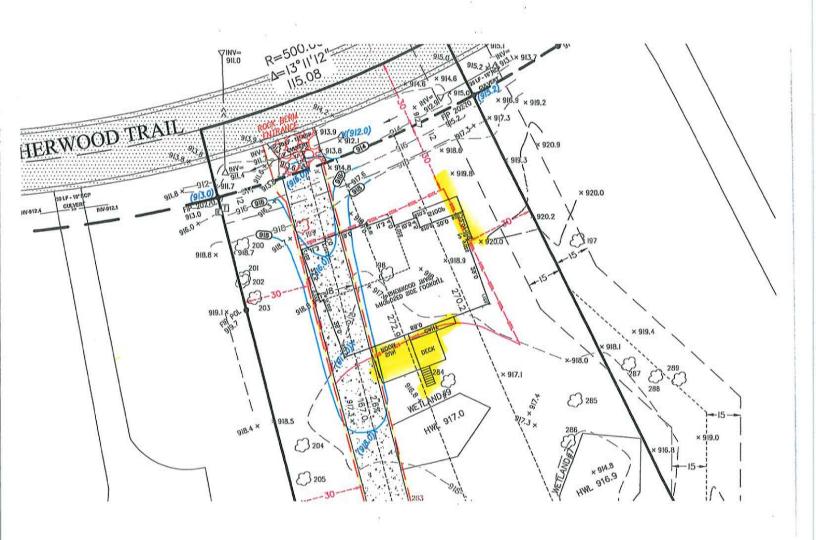

Thank you for your consideration, Hanson Builders Inc.

RE: 8 Sherwood Trail Sambatek Project No. 51986

Dear Kendra:

I have reviewed the Conditional Use Permit request for the overall building height for this parcel.

The proposed home location requires the driveway to be located between 2 existing wetlands. City Ordinance requires a 30-foot setback from all wetlands. This condition cannot be met and I am recommending denial of this request.

Sincerely, Sambatek, LLC

Michael Melson

DATE: March 9, 2023

SUBJECT: Comments – 8 Sherwood Trail - Driveway

Please find below, per your request, the VLAWMO "advisory" comments for 8 Sherwood Trail – Driveway, received 3-8-2023. These comments are advisory only given that VLAWMO does not operate a regulatory program for development review with exception of the Wetland Conservation Act (WCA). Our Water Management policy and standards have been adopted and are enforced by our respective City's and Township.

• A MN Routine Assessment Method (MNRAM) worksheet was completed on 4/6/2020, which identifies management classes for each wetland on site. 8 Sherwood Trail wetlands (W9 & W7) are Manage 2 wetlands. Base buffer width of 30ft, Applied buffer with of 24ft. See below table:

Management Class	Base Buffer Width (ft)	Minimum Applied Buffer Width (ft)
Manage 3: Storm Ponds	20	16
Manage 2	30	24
Manage 1	40	34
Preserve	75	67

• Per the Buffer section in the Water Management Policy (chapter 11 "Buffers" starting on pg 26) The buffer width may vary based on demonstrated site constraints, provided that a width of at least 50 percent of the applied buffer width is maintained (in this case that would be 12ft). See section 5 in chapter 11 Buffers.

Scott,

Yes, please share whatever information you have about the tree removal and restoration agreement. It may help head off further discussion at the Council.

If you can get your narrative in by the end of the week, that would be great.

We are only going to have 3 council members at the 3/14 meeting, so we will push all of the planning items to the April 11<sup>th</sup> Council meeting.

Please let me know if you have any other questions.

Subject: Re: 8 Sherwood

Good afternoon Kendra & Kevin, I wanted to communicate a couple updates regarding 8 Sherwood and the planning committee meeting:

- 1. Thank you both for being the voice of reason in the planning commission meeting. I was a little caught off guard with the question on the trees, but I did follow up with my team and I they came to an agreement with Bill Long at NOHOA last week to replace and/or plant a few trees, since so many did have to come down that were diseased or dead. Let me know if you guys want any specifics on this, otherwise there is an agreement in place with NOHOA
- 2. I do have my narrative for 8 Sherwood reformatted per your guidance below. Awaiting some final pieces of information, but hope to have that back over to you by the end of this week with more supporting materials. Wanted to make sure that timing will be sufficient or if there is some other deadline we need to hit
- 3. Kevin, per your update at the planning meeting, you mentioned there would not be many council members at the March 14<sup>th</sup> meeting. Is that meeting still happening or is it being cancelled/rescheduled? I'm in agreeance to your suggestion to push off the CUP approvals for 1 & 2 Sherwood unless there was something else in the works

My forte is coordinating our teams to build homes, not speaking at city meetings, so I appreciate your help on these matters
